COMPANY OVERVIEW

**CEO:** HangJoo Choi | **Established:** 03. 2019 | **Capital:** \$35K

Grebt develops a bloodless-based diabetes measurement sensor and diabetes measurement device that eliminates the fear of blood sampling and the pain of blood collection.

A urine glucose meter is a meter that measures the concentration of glucose in urine, and reacts blood glucose in urine. It consists of a strip, a disposable consumable that generates an electrochemical signal. The urine glucose meter can be used continuously once purchased.

MAIN PRODUCT

[ Service Product ] **urine glucose meter** | **Applicable to:** Adult(20-79years), children(up to 19years)

- About:
1. Since diabetes is measured based on urine, there is no fear and pain of blood collection, and there is no risk of secondary infection
  2. It is easy to carry and measure because it consists only of measuring sensors and measuring devices
  3. The measured data is stored on the platform
  4. It is economical because it is used 50 times
  5. The sensor is re-used by washing with water
